

# HOME ENERGY MONITORS

VS.

# TRADITIONAL ENERGY AUDIT

If you've ever been shocked by a high energy bill and wondered, "Where is all my electricity going?", you're not alone. Many homeowners turn to traditional home energy audits to identify inefficiencies, but there's another option that provides real-time insights into your home's energy use: the **Emporia Vue Home Energy Monitor**.

## What's the Difference?

### Traditional Home Energy Audit

A one-time assessment by an energy expert who checks insulation, air leaks, and appliance efficiency to recommend improvements.

### Emporia Home Energy Monitor

A device installed in your electrical panel that provides continuous, real-time data on your electricity consumption, helping you pinpoint which appliances are using the most energy.

### Try it yourself!

Southeastern Indiana REMC isn't selling the Emporia Home Energy Monitor, but we do have a few available for members to borrow. If you'd like to test one out and track your home's energy use before making efficiency upgrades, give us a call!

### Watch our Tech Talk Video to Learn More

Want to see the Emporia monitor in action and learn how it compares to a traditional energy audit? Check out this month's Tech Talk video on:
